Description:

The AQUARI system is proof that innovation in the field of sanitary cabins is possible. AQUARI represents an approach to our previously developed products - continuous improvement aimed at delivering leading solutions.

The most intriguing element of the AQUARI system is the hinge hidden in the door frame profile. This solution ensures an aesthetic appearance and protects against potential collisions - finger trapping between the door leaf and the frame. The cabin support is mounted in line

with the frame profiles, creating a cohesive and harmonious whole. The AQUARI system is a combination of the highest quality materials, innovative solutions, and original design. These solutions have been patent protected.

only Torx screws are used

doors opening outward or inward

hinges with gravity self-closing

very high durability

tailor made to individual dimensions

Patent
P. 425699
(hidden hinge)

Patented Safe Fingers solution

CE certificate valid throughout the European Union

Aluminum fitting

Fittings developed by ALSANIT are manufactured in Poland at the company headquarters

Production on CNC machines ensures precision and short lead times

AQUARI construction details

Construction details:

Hinges

- „safe fingers” system - protects fingers from being pinched
- tested durability: 200,000 open/close cycles
- hidden in aluminum profile
- minimalist appearance
- with gravity self-closing function

Knob-locks

- aluminum finish
- emergency opening capability
- universal for left/right doors
- Bolt rotation angle of 360°
- „click” every 90°
- easy to use, also for disabled individuals
- white-red occupancy indicator
- optionally available in preschool cabins

Support-legs

- mounted in the door frame profile in line with the hinges
- ensure easy leveling of partitions
- aluminum with a stainless steel core
- adjustment range +/- 20 mm
- rosette mounted on two dowels, covered with a plate

Types of panels available for the system:

MFC

Laminated chipboard

18 mm

MFC is compressed under high temperature and pressure using binding agents with wood chips. The top layer is a decorative melamine coating.

- edges are finished with durable edging using HOT-AIR technology (glueless)
- suitable for rooms with normal humidity

Fire classification: Ds1d

A solution for door frame

Integrated support leg with the profil

Top-mounted beam (in saloon cubicles - no beam)

HPL

High pressure laminate

10 mm

12 mm

HPL (High Pressure Laminate) - cellulose fibers saturated with resin and compressed under high pressure. The material is 100% waterproof and its properties are consistent throughout the entire board cross-section.

- milled edges-black core of the board is visible
- for rooms with high humidity

Fire classification: Cs2d0 - 10 mm, Bs1d0 - 12 mm (option)

A solution for door frame

Integrated support leg with the profil

Top-mounted beam (in saloon cubicles - no beam)

„Safe fingers” solution

We have developed a unique solution which involves placing the hinge mechanism inside closed profiles to provide additional protection for hands from injury. The features of the system are summarized below:

- hinges are hidden within the door frame profiles, preventing fingers from being trapped between the door leaf and the frame,
- the hinge self-closing does not have a spring that could hit a child when the door is pulled,
- doors close due to gravity force - an extremely safe and reliable solution,
- this solution has been filed for patent protection and is produced exclusively by ALSANIT in Poland.

URINAL PARTITIONS

By using an aluminum rosette, we achieved an effect of exceptional lightness.

ALSANIT urinal partitions are installed using rosettes, eliminating the need for support legs.

available

Sink countertops are an important element of restroom furnishings.

Due to the direct exposure to water, they need to be made of durable materials and properly installed.

available

SHOWERS

Shower cubicles produced by ALSANIT are aesthetic, practical, and durable.

Thanks to the use of durable, and fully waterproof materials, ALSANIT shower cubicles are an investment for many years. Showers are typically made basing on the SOLARI system fittings

HPL

10 mm

12 mm

Installation:

1. Level and mount the bottom profile to the floor .

2. Place the steel frames for cladding on the profile, align, and attach them to the masonry wall.

3. Connect the frames with „shadow” panels. Mount masking panels at the bottom and top.

4. Fit the cladding panels up to the height of the utilities and fixtures. For the cladding where fixtures will be installed, cut openings for the connections/fixtures

5. Secure and connect the fixtures to the cladding.

6. Install the remaining cladding.
